

Recycled Acrylic Information Sheet

Recycled Acrylic is 100% recycled and 100% recyclable. Due to a broad range of benefits, Recycled Acrylic is recognised as a more environmentally conscious alternative to your standard acrylic sheets.

Eco Credentials

- The process in which this material is produced means the recycled acrylic has the same quality as new virgin acrylic.
- Recycled Acrylic has the ability to be recycled countless times again without losing any important properties.
- The factory waste, where this process is taken place, is able to be put back in to make more recycled acrylic, reducing the amount of acrylic making it to landfills.
- Recycled Acrylic reduces the demand for more acrylic (thereby decreasing our dependence upon finite fossil fuels).
- Recycled Acrylic gives a second life to a plastic which often ends up in landfill or the ocean.
